

Periodicals

Periodicals

Periodicals are materials published at regular intervals.

Examples of different types of periodicals:

Newspapers

Magazines

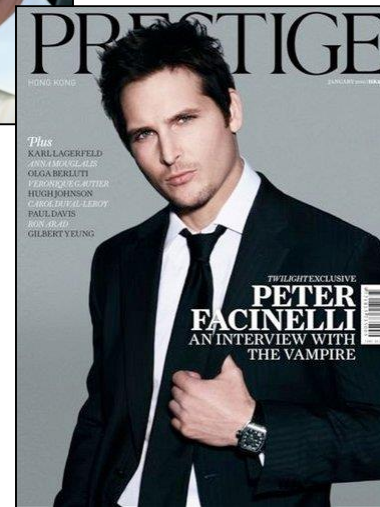

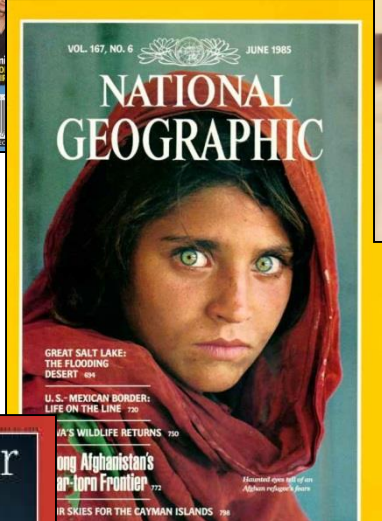

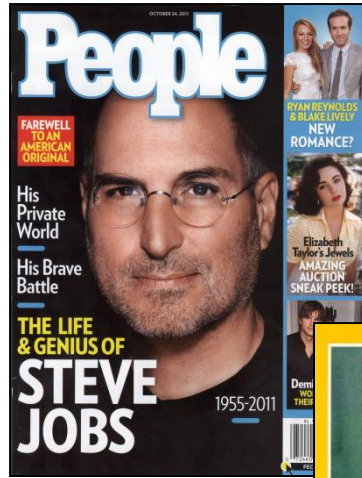

Journals

Newspaper article characteristics

Provide current information on a variety of topics.

- **Time frame:** daily or instantly (for online ones)
- **Audience:** general public
- **Authorship:** journalists & reporters
- **Content:** summary or overview of events & basic factual information
- **Length:** brief

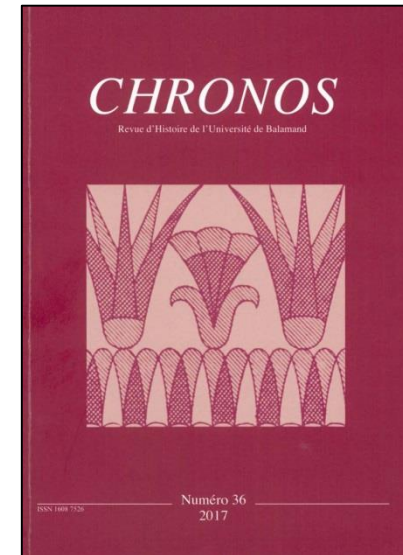

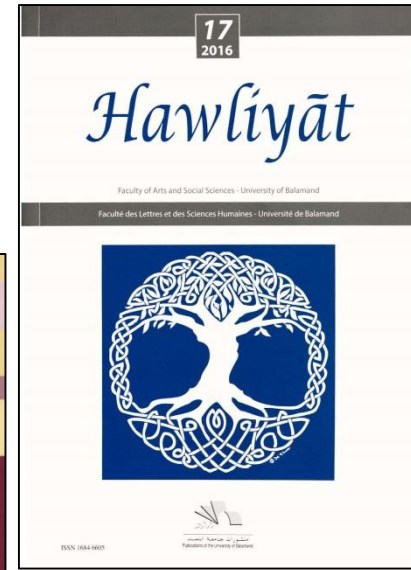

Magazine article characteristics

Include articles on various and popular topics.

- **Time frame: monthly, weekly,...**
- **Audience: general public**
- **Authorship: editors or staff writers**
- **Content: general overview of topics, news, reports, interviews, etc.**
- **Average length: 1-5 pages**

Scholarly journal article characteristics

Contain research oriented articles addressed to professional audience.

- **Time frame:** monthly, yearly, ...
- **Audience:** scholars, researchers, and students
- **Authorship:** experts in the field such as scholars or researchers affiliated with universities and academic institutions
- **Language:** specialized, technical, or scientific
- **Content:** research, theories, studies and experimental results and analysis. Resources are documented in reference lists
- **Length:** usually more than 5 pages
- Subject to a peer-review process

Volume & Issue

- Journals are mainly published and referenced by **volume** and **issue**.

Vol. 1 Issue 4

Vol. 132 No. 3 August 2010

Volume 15 No. 6

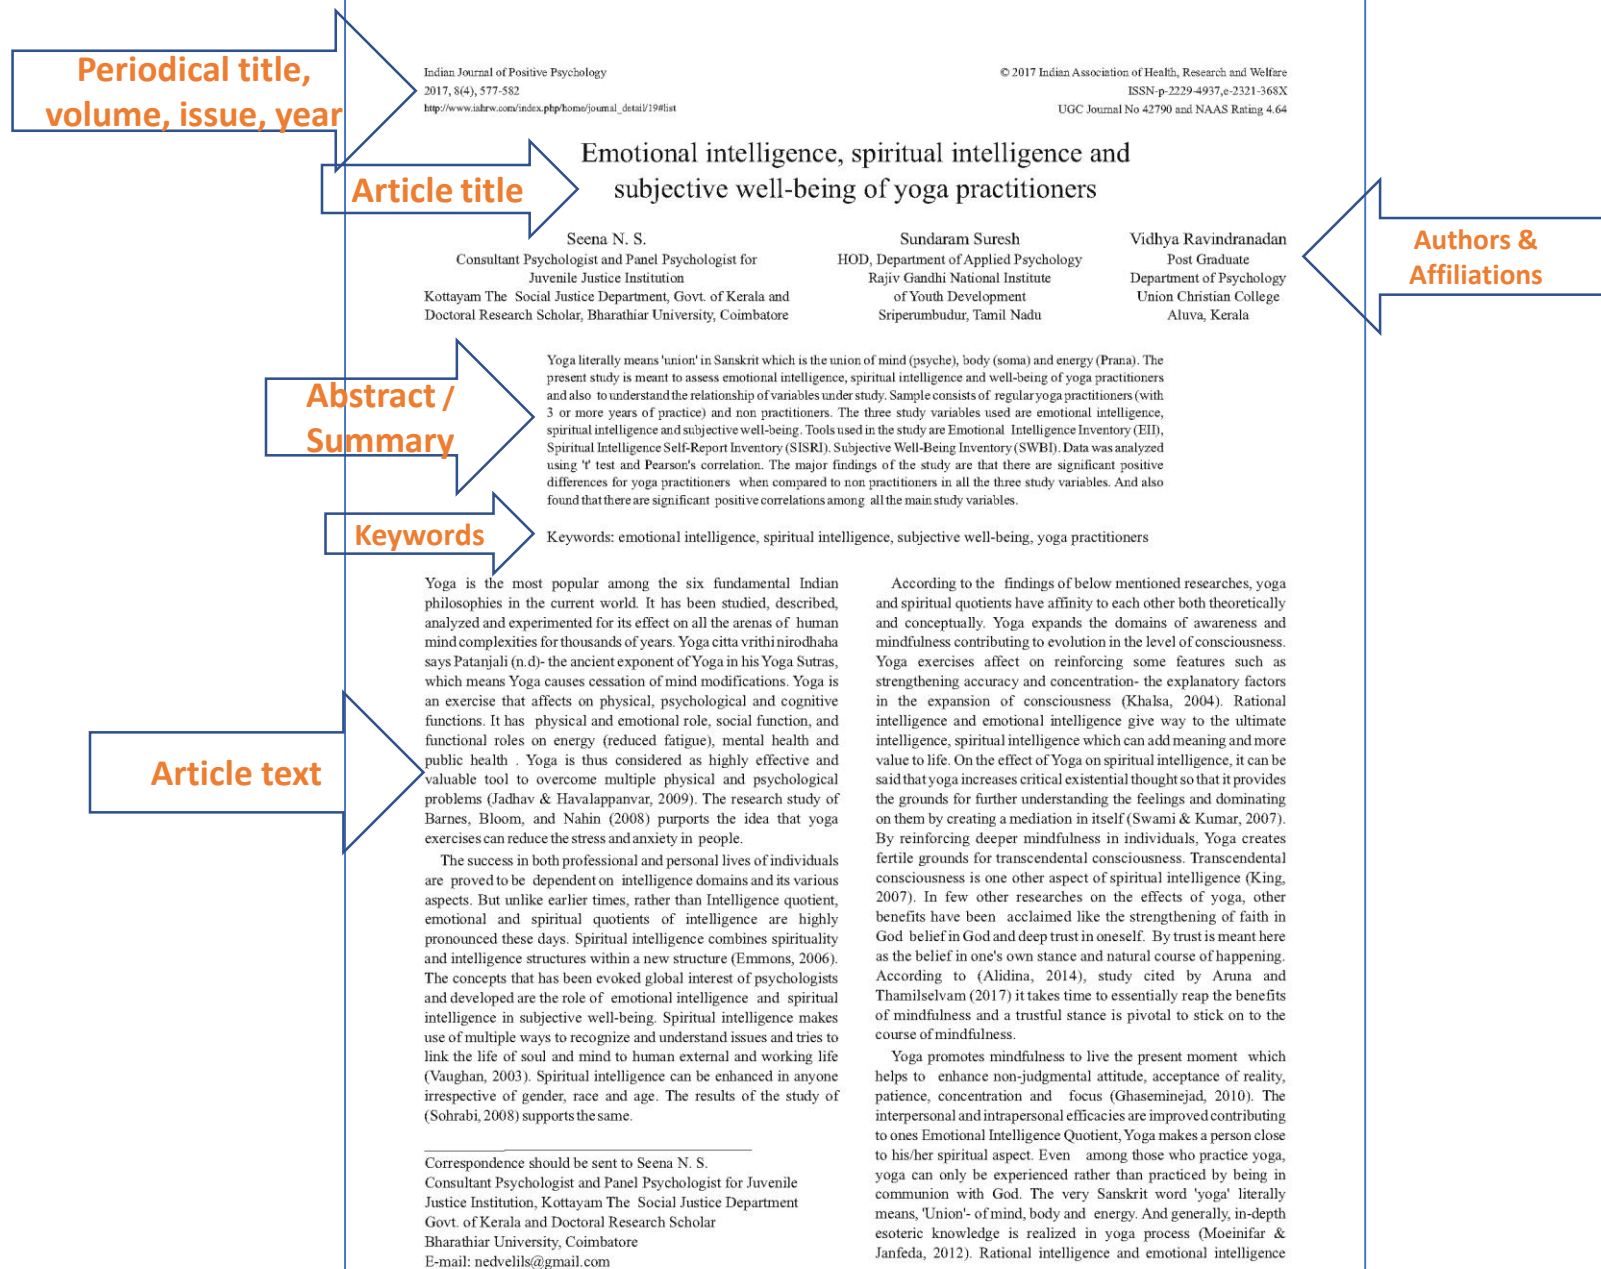

- Note that some journals are identified by volume only while others are identified by issue only.

Articles

Information in periodicals is
published in forms of **articles**.

and with subjective well-being. It shows that as spiritual intelligence increases, total emotional intelligence also increases. Hence the fourth hypothesis that, there will be significant relationship between emotional intelligence and spiritual intelligence is accepted. The table also shows that as the spiritual intelligence enhances subjective well-being also enhances. Hence the hypothesis 5 that, there will be significant relationship between spiritual intelligence and subjective well-being also stands accepted. There are low to moderate correlations among the three variables. These results are in agreement with the results obtained by Zohar and Marshall (2000). Their finding is that spiritual intelligence is the most essential to our well-being. Spiritual intelligence helps to provide meaning and purpose to life.

The significant positive correlations between Spiritual and Emotional intelligences could be due to the fact that there is fascinating relationship among the components of spiritual and emotional intelligences according to Zohar (2004). The results of the present study support the findings of Zohar and Marshall (2006) of a significant positive relationship between spiritual intelligence and emotional intelligence. Emotional intelligence is considered the stepping stone to spiritual intelligence.

The coefficients of correlation between all factors of EQ and total Emotional intelligence with subjective well-being was analyzed using Pearson's Product Moment method and the results are shown in the following table 5

Table 5: Correlation of EQ with SWBB

Emotional Intelligence	Subjective well-being
PE	0.46**
IPE	0.33**
INPE	0.39**
Total EQ	0.46**

**Significant at 0.01 level (2 tailed)

The results shown in table 5 indicate that the different dimensions of emotional intelligence and total Emotional intelligence (EQ) are having significant positive correlations with subjective well-being. The sub factors of emotional intelligence considered here are Personal Efficacy (PE), Interpersonal Efficacy (IPE), Intrapersonal Efficacy (INPE). The results above also shows that higher the emotional intelligence, higher is the subjective well-being. This clearly paves way to the acceptance of hypothesis 6 that, there will be significant relationship between emotional intelligence and subjective well-being. The moderate positive correlations points out that as emotional intelligence increases subjective well-being also increases. Jain and Purohit (2006) opine that the self awareness is significantly related to well-being. Self-awareness is an important component and determinant of emotional intelligence.

Results show that yoga practitioners have greater spiritual intelligence, emotional intelligence and subjective well-being when compared to non-practitioners. There are significant positive correlations among spiritual intelligence, emotional intelligence and subjective well-being.

Conclusion

In summarizing the results obtained in the present study, it is feasible to arrive at following conclusions. There are significant differences between regular yoga practitioners and general public in their

emotional intelligence, spiritual intelligence and subjective well-being. Yoga practitioners have higher emotional, spiritual intelligences and subjective well-being than non practitioners. Taking view on the correlations there is significant positive correlations between emotional intelligence and spiritual intelligence. Significant positive correlation is found between spiritual intelligence and subjective well-being as well. There are significant positive relationships between emotional intelligence and subjective well-being too. Thus all the six hypotheses are accepted.

Implications of the study

As the findings reveal, the spiritual intelligence is having crucial importance upon ones emotional intelligence and subjective well-being. It is clearly evident in the present study that yoga practitioners generally have greater emotional intelligence than non-doers which means they have better ability to control their emotions. A worthwhile suggestion in the light of the present study is that Yoga could be made compulsory part of the educational system and if possible also at workplaces. The time spent on it need not be considered as an extravaganza as the quality of the remaining hours and of the output will be significantly enhanced. The well-being of an individual is extremely influenced by emotional intelligence. So steps like yoga and other holistic practices should be taken up to feel satisfaction in life. Ardent yoga practitioners are having high emotional intelligence, spiritual intelligences and subjective well-being comparatively. The research findings of Moeinifar and Janfeda (2012) vouches that meditation, esoteric knowledge and the discipline of yoga contribute to higher score in factors contributing to fulfilling family relations and well-being. As found beneficial more people irrespective of their ages should be encouraged to take up yoga to lead a better integral quality of life and contribute to a better social environment. Yoga should be promoted and practiced more for the betterment of humanity and the cosmic family as a whole.

References

Through UOB Libraries, you have access to:

- Print articles available among the **print periodicals** collection;
- Electronic articles available through the library research databases.

Terms & Concepts

- **Multidisciplinary/General vs. Subject database**

- A multidisciplinary database contains material that cover a wide range of subjects/disciplines.
- A subject database contains material specific to a certain field of study.

- **Full text vs. Abstract database**

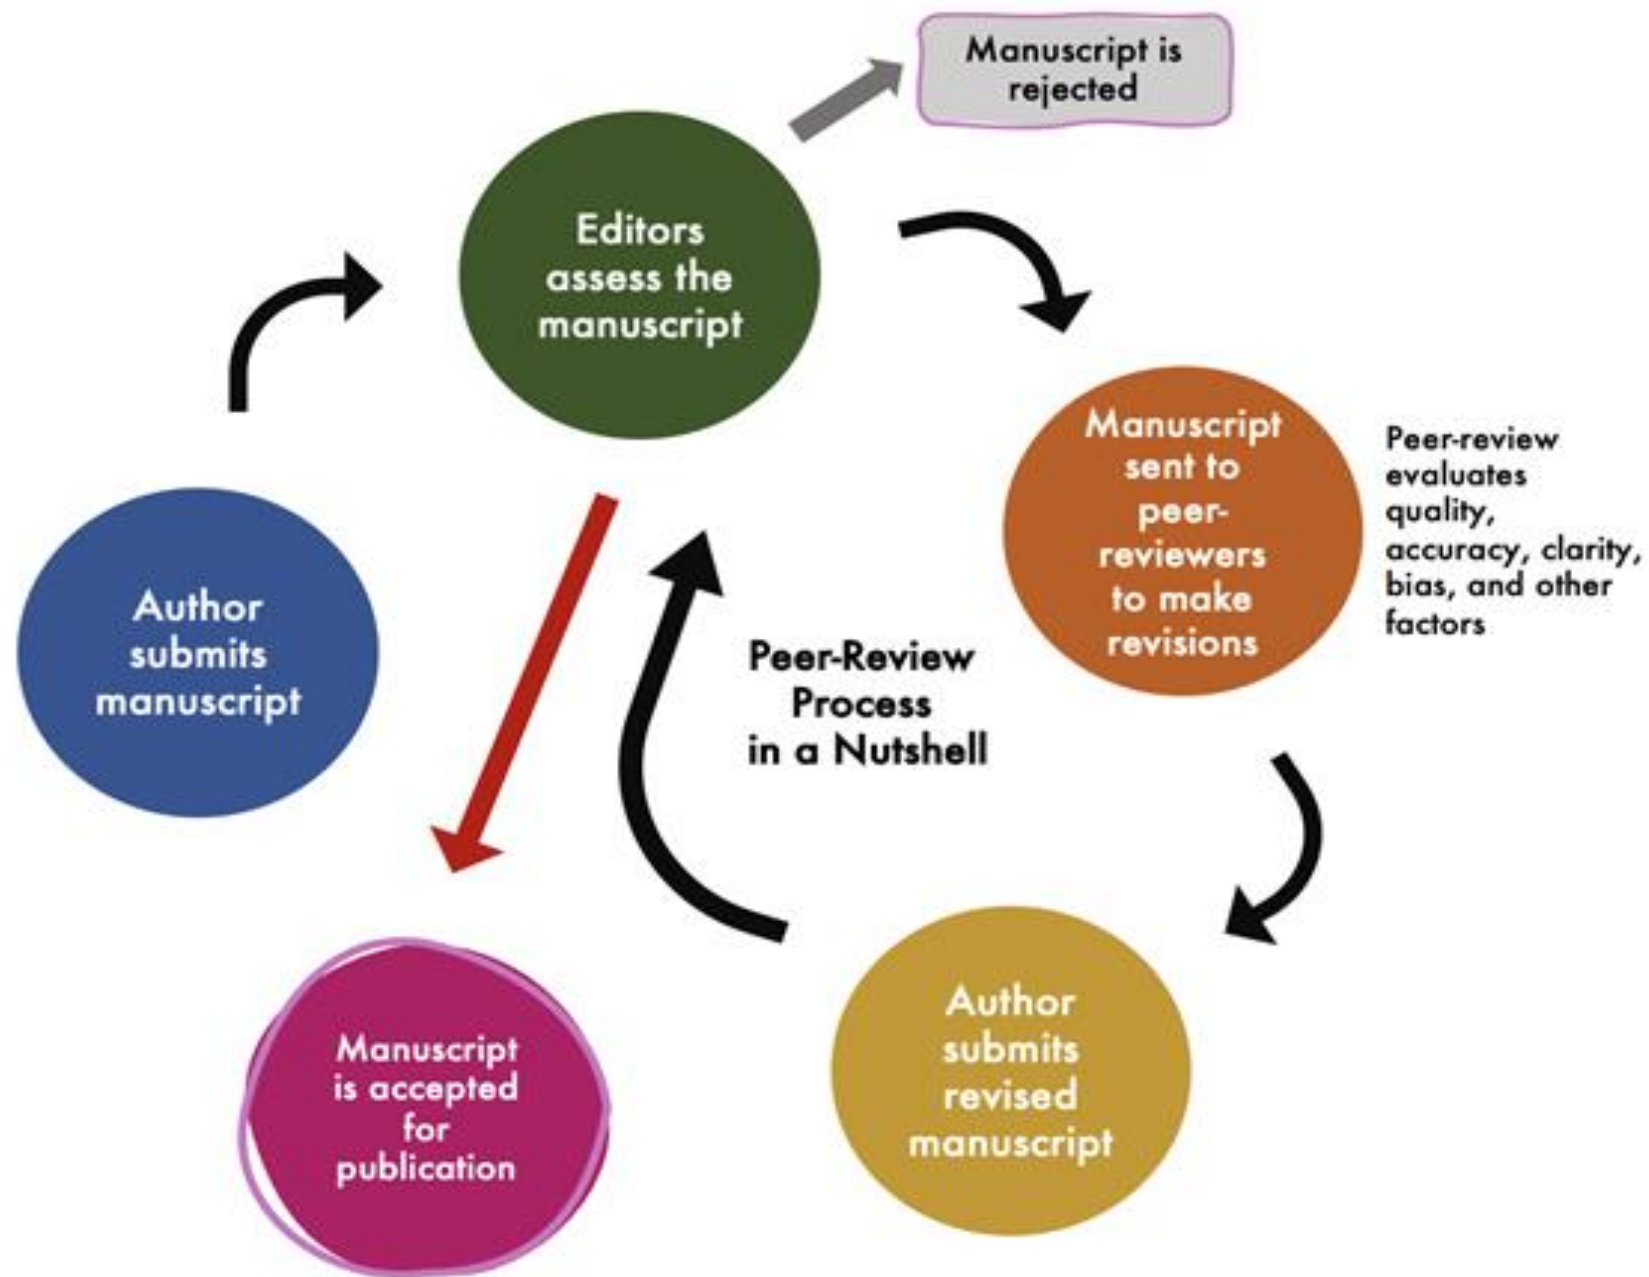

- A full-text database provides access to the entire text material (articles, books, etc.) in electronic format.
- An abstract database provides only the abstract/summary of the article/book.

Terms & Concepts

- **Scholarly Peer-Reviewed**

- “**scholarly**” means the article written by specialists for an audience of experts, researchers or students.
- “**Peer-reviewed**” means the article was reviewed and criticized by peers who are experts in the same subject area.
- **Reviewers evaluate content, check references, and give recommendations about the publication; they may approve, ask for modifications, or not approve it at all.**

Terms and Concepts

- **DOI: Digital Object Identifier**

A permanent and unique string of numbers used to identify a persistent link to a content on the web.

DOI: <https://doi.org/10.31377/chr.v20i0.473>

How to evaluate articles?

How to evaluate articles?

Relevancy

- Does the information relate to your topic or answer your question?
- Is the information current? Updated?

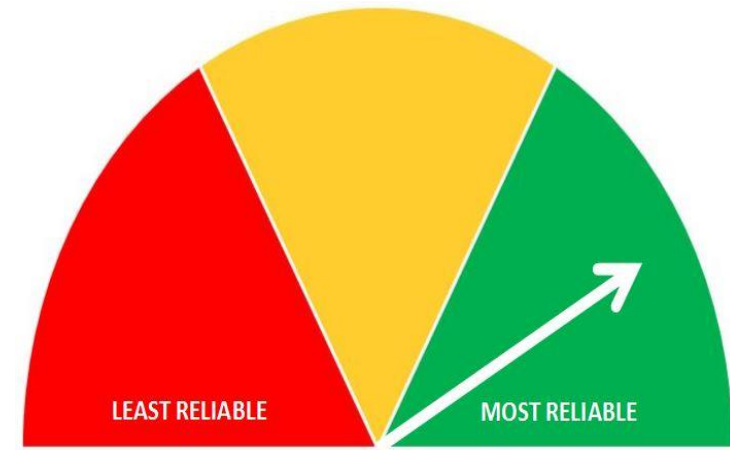

Usually reading the abstract and the keywords and looking at the date of publication help researcher determining if the article is relevant.

Reliability

- The trustworthiness of the information presented.

The authors' affiliations is a good indicator of reliability, it indicates if the authors are expert in the subject. The publisher if the journal is also an indicator of quality. The researcher can also look at other metrics such as the quality of the references, and citation metrics.

ASK YOURSELF: Is it a CRAAP?

- The **CRAAP Test** helps you to evaluate the information you find in any article.
- Depending on your need, different criteria will be more or less useful.

Currency : Timeliness of the information

- *When was the information published or posted?*
- *Has the information been revised or updated?*

Relevance: the importance of the information for your needs

- *Does the information relate to your topic or answer your question?*
- *Is the information at an appropriate level (i.e. not too basic or advanced for your needs)?*
- *Would you be comfortable using this source for a research paper?*

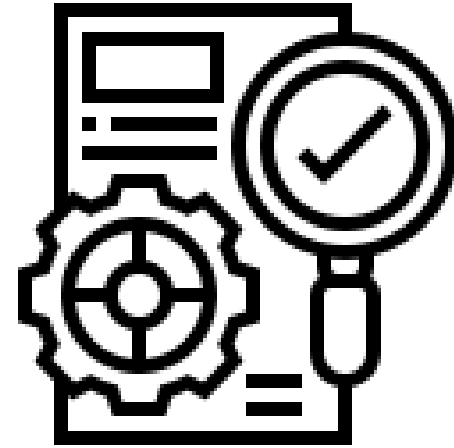

Authority: the source of the information

- *Who is the author / publisher / source / sponsor?*
- *What are the author's credentials or organizational affiliations?*
- *Is there contact information, such as a publisher or email address?*

Accuracy: the reliability, truthfulness, and correctness of the information

- *Where does the information come from?*
- *Is the information supported by evidence?*
- *Has the information been reviewed or refereed?*
- *Does the language or tone seem biased and free of emotion?*

Purpose: the reason the information exists

- *What is the purpose of the information? Is it to inform, teach, sell, entertain, or persuade?*
- *Is the information fact, opinion, or propaganda?*
- *Are there political, ideological, cultural, religious, institutional, or personal biases?*

Library research A-Z databases

❑ Library research databases contain online **subscribed** and **open access** platforms which provide access to:

- **Articles**
- **Books**
- **Conference papers**
- **Dissertations**
- **And more...**

Examples of multi-disciplinary library databases that contain articles are

Academic Search Ultimate and **Proquest Central**
