Assessment: Group Project – Flipped Classroom Design and Implementation

Lesson: Grade 8 Physics Chapter 5_forces

Students will work collaboratively in groups to design and implement a flipped classroom lesson based on Grade 8 forces chapter.

As part of this assessment, students are expected to:

- Revise the key learning objectives into SMART objectives
- Design an engaging and interactive pre-class instructional materials that promote independent learning and enhance student's critical thinking,
- Apply pedagogical principles of the flipped classroom model to structure both pre-class and in-class components
- Develop and facilitate engaging in-class activities that promote inquiry, conceptual understanding, and student interaction
- Incorporate differentiation strategies to address diverse learner needs

Expected Deliverables:

- Pre-class materials. Be creative!
- A detailed lesson plan outlining both pre-class and in-class phases
- In-class implementation or simulation of selected activities
- A brief reflective commentary on pedagogical choices and student engagement strategies

Assessment criteria will include:

- Depth and accuracy of physics content knowledge
- Application of instructional design principles
- Effectiveness of flipped classroom implementation
- Quality and clarity of instructional materials
- Collaboration and professional communication
